

EVERPURE® EXUBERA®

EXUBERA APPLIANCE FOR CHILLED SPARKLING OR STILL WATER

Get luxuriously chilled and sparkling water at the tap with the Pentair® Everpure® Exubera sparkling and chilled water appliance. The perfect complement to a Pentair Everpure commercial-grade water filtration system, the Everpure Exubera by Pentair delivers the best-tasting chilled, sparkling or still water available – perfect for flavored sparkling beverages or classic bar drinks. Add flavored syrups for truly customized beverages. Adjust the amount of “fizziness” of your sparkling water by simply adjusting the regulator on the CO₂ canister.

FEATURES

- Provides sparkling, bubbly water with adjustable carbonation level
- Compact unit is easy to hide in any kitchen cabinet or wet bar
- Easily controlled water temperature and carbonation levels with adjustable thermostat
- Chills to an ideal temperature of 40° F (4.4° C)
- Delivers 7.9 gallons (30 liters) chilled/carbonated water per hour
- Delivers 1.85 gallons (7 liters) of cold water in one draw

- Draws minimal electricity
- Stainless steel components
- 3-wire service cord and plug included
- Ambient water port equipped
- Can be plumbed to coffee or ice machine
- Controllable carbonator and temperature levels

ORDERING INFORMATION

MODEL	PART NO	DESCRIPTION
Exubera®	EV983050	Combination water appliance

GENERAL INSTALLATION / OPERATION / MAINTENANCE REQUIREMENTS

Not recommended for use with a Reverse Osmosis (RO) water filtration system – eventual damage to the pump will result. To prevent damage, install with a booster pump or autoclave.

Minimum requirements for incoming water – Water pressure: 14.5 psi; 0.5 gpm (use a booster pump to increase water requirements)

Install a pressure reducer when water pressure exceeds 43.5 psi.

Install the appliance away from heat sources and direct sunlight.

Do not install the appliance outdoors or in damp locations.

Minimum installation space – 2.5 inches from adjacent surfaces for proper air circulation around appliance.

The appliance generates heat, so external venting may be required when it is installed in a cabinet.

Appliance must be supported on all four foot pads.

Correct water pressure is necessary for proper operation of carbonation feature.

Carbonated water operation – For proper pump operation, water must always be present in the cooling circuit.
