

EVERPURE® PBS-400

PBS-400 DRINKING WATER SYSTEM FOR KITCHEN OR WET BAR

The same commercial quality that makes Pentair® Everpure® the overwhelming choice for water filtration in restaurants is also available for your entire home, including the kitchen and wet bar. The Pentair Everpure PBS-400 introduces great-tasting, crisp, clean filtered water at the prep sink for washing and preparing vegetables and fruits, at the potfiller for making pasta, soups and sauces, and at the wet bar for mixing drinks and making ice. The Pentair Everpure highly engineered submicron design rids water of unwanted lead and chemical impurities, and provides a fast, convenient water flow that won't slow you down.

GENERAL INSTALLATION / OPERATION / MAINTENANCE REQUIREMENTS

This drinking water system must be maintained according to the manufacturer's instructions, including replacement of filter cartridges. The substances reduced or removed by this system are not necessarily in your water. Read the performance data sheet.

It is recommended that before purchasing a water treatment unit, you have your water tested to determine your actual treatment needs.

Space required: 5W x 20H x 5D in (13W x 51H x 13D cm) including 2-1/2 inches of clear space under unit for cartridge change

Do not use with water that is microbiologically unsafe or of unknown quality without adequate disinfection before or after the system. Systems certified for cyst reduction may be used on disinfected water that may contain filterable cysts.

Install vertically with cartridge hanging down.

Use minimum length of tubing possible

Flush new cartridge at full flow for three minutes to purge air.

Replace cartridge when capacity is reached, or when flow becomes too slow. To ensure optimum water filtration, cartridges should be changed annually.

System comes complete with filter cartridge, head, fittings, and tubing.

Health Claim Performance Certified to NSF/ANSI Standards*

This system has been tested according to NSF/ANSI 42 and 53 for the reduction of the substances listed below. The concentration of the indicated substances in water entering the system was reduced to a concentration less than or equal to the permissible limit for water leaving the system, as specified in NSF/ANSI 42 and 53.
